## Introduction

"We forget that the water cycle and the life cycle are one." — Jacques Yves Cousteau

Water is the primary source of life on earth. It is the reason why we can live and feel alive. Despite its lack of colour, colour or smell, it remains the most cherished natural resource. Not only does it sustain diverse life systems across the continents and oceans of our planet, it also drives the socio-economic development of the world. But, its abundance should not delude us into believing that it is an unlimited resource.

Day by day, water is rapidly becoming a limited resource. Every part of the world is suffering from water crisis, due to enormous exploitation and misappropriation of water. Droughts and floods are increasingly becoming the lived realities of millions of people worldwide. There is still some time to address this issue to keep it from worsening.

Water security is crucial for the continued existence of all the living systems in longevity. Its sustainable and equitable distribution is decisive for a peaceful and stable world-order. When all the communities, regardless of religion, class, sect, caste or gender, have an equal access to water, every member of the society can benefit and create an impact. Lack of such policies can lead to a bleak future of humanity.

To address this monstrous challenge, the 7<sup>th</sup> India Water Week - 2022 is being organized by the Ministry of Jal Shakti during 1 - 5 November 2022. The IWW platform hosts a spectrum of policy-makers, statesmen and innovators with an array of perspectives to identify and build inventive technological, political, economic and social solutions for "Water Security for Sustainable Development with Equity."
